

Smart Living, Perfectly Balanced.

The Smart Way to Assist Your Customers from Anywhere

iZone's 'Zonewatch' remote access site empowers you to enhance your service. This innovative tool not only gives you the ability to remotely diagnose and fix issues, saving you valuable time and expenses, but it also helps you build a reputation for quick, professional, and convenient customer support.

Review your team's installations in one place, seeing details and performance for each system.

Installation Overview

System ID	Home Owner	Address	Suburb	State	eMail Address
00001	Drew Michaels	40 King Edward Road	Osborne Park	Western Australia	
00123	Elia Lee	297 Miley Street	Aspley	Queensland	
00231	Ive Brown	44 Charles Circuit	Kellyville	New South Wales	
00678	Chloe Matthews	67 Katie Circuit	St Kilda	Victoria	

See the type of wall controller and the latest updated version for every system. See the brand of air conditioning that was installed.

View the brand of air conditioning installed and the split systems connected to the iZone System. Share installer installation details securely with your employer for accurate records.

Summary Report

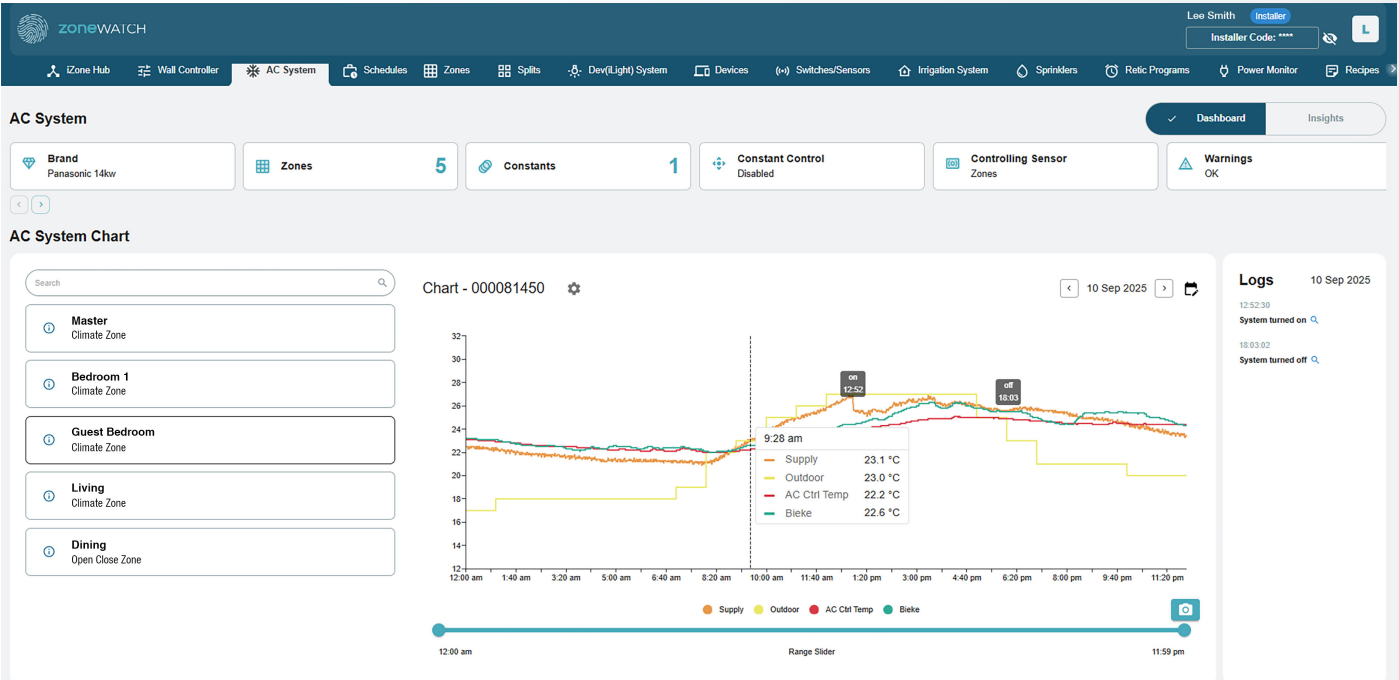

Advanced constant control area setting incorrect | Has zone sensor fault

1 of 1 Systems

See all iZone smart devices connected to the iZone System. Access all settings for different zones to ensure correct operation and comfort. Monitor active and inactive schedules and recipes for each system.

Maintain installation records of all work performed by your team for accurate site history. View overall performance of each air conditioning system to ensure efficiency and comfort.

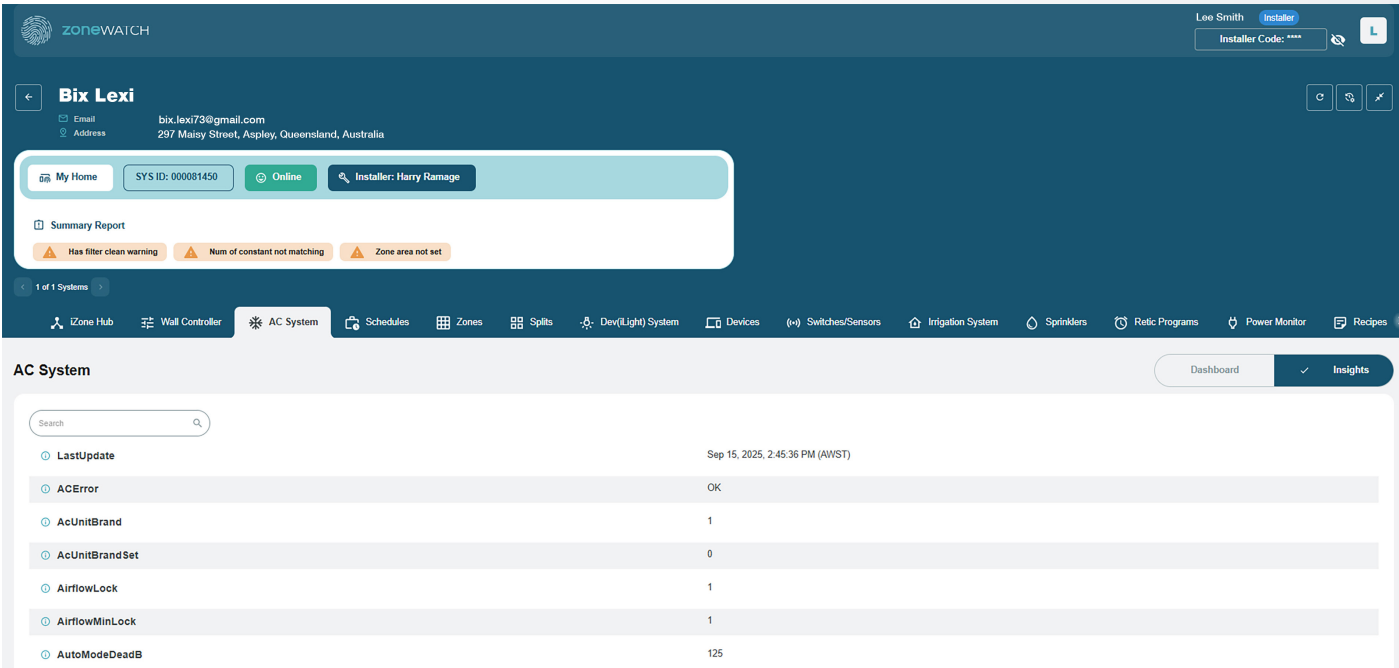

Performance Monitoring

Review historical system data from the last 7 days, including supply air and room temperatures, AC unit errors, and damper faults. Adjust system settings remotely, including temperature set points and scheduling, to optimise performance or correct configuration errors.

Use remote troubleshooting to diagnose issues via error-specific codes, such as P26. Verify homeowner claims by checking actual system performance and comparing with data.
